Microsoft + Google sign-in: setup flow

Entra app registration → Google Cloud project → connect Google to Entra → app settings → run and test

APP-ID	Application (client) ID from step A5
TENANT-ID	Entra ID → Overview → Tenant ID
YOUR-OBJECT-ID	Entra ID → Users → your user → Object ID

A. Entra: register the app (entra.microsoft.com)

1. Entra ID → App registrations → **New registration**.
2. Name: `observe-auth`.
3. Supported account types: **Any organizational directory and personal Microsoft accounts**.
4. Redirect URI: platform **Single-page application**, value `http://localhost:5174`. Click **Register**.
5. Copy the **Application (client) ID** (APP-ID).
6. Expose an API → Application ID URI → **Add** → **Save**. Then **Add a scope**: name `access_as_user`, who can consent **Admins and users**, state **Enabled**.
7. Manifest → set `requestedAccessTokenVersion` to `2` → Save.
8. Token configuration → Add optional claim → **Access** → `acct` → Add.
9. API permissions → Add a permission → My APIs → **observe-auth** → `access_as_user` → Add. Click **Grant admin consent**.
10. API permissions → Add a permission → Microsoft Graph → **Application permissions** → `User.Invite.All` → Add. Click **Grant admin consent**.
11. Certificates & secrets → **New client secret** → Add. Copy the **Value**.

B. Google Cloud: create the project (console.cloud.google.com)

12. Project menu → **New Project** → name `Entra B2B` → Create.
13. APIs & Services → **OAuth consent screen**.
14. User type **External**. Enter app name, support email and developer email.
15. Authorized domains → add `microsoftonline.com` → Save.
16. Click **Publish app**.
17. Credentials → Create credentials → **OAuth client ID** → **Web application**.

18. Authorised redirect URIs, add all three:

```
https://login.microsoftonline.com
https://login.microsoftonline.com/te/TENANT-ID/oauth2/authresp
https://login.microsoftonline.com/te/YOURNAME.onmicrosoft.com/oauth2/authresp
```

19. Click **Create**. Copy the **Client ID** and **Client secret**.

C. Entra: connect Google

20. External Identities → All identity providers → **Google** → Configure. Paste the Client ID and secret → Save.
21. External Identities → External collaboration settings → **Enable guest self-service sign up via user flows** = Yes → Save.
22. External Identities → User flows → **New user flow**. Name `observe-signup`. Tick **Google** and **Azure Active Directory Sign up**. Collect **Display Name**. Click Create.
23. Open the flow → Applications → **Add application** → `observe-auth` → Select.

D. App settings

24. Create `apps/auth-api/.env`:

```
API_CLIENT_ID=APP-ID
AUTH_MODE=open
GUEST_POLICY=pending
SEED_TENANTS=TENANT-ID=Technorucs
BOOTSTRAP_ADMINS=TENANT-ID:YOUR-OBJECT-ID
TENANT_ID=TENANT-ID
INVITE_CLIENT_SECRET=secret value from step 11
WEB_URL=http://localhost:5174
CORS_ORIGIN=http://localhost:5174
```

25. Create `apps/auth-web/.env.local`:

```
VITE_CLIENT_ID=APP-ID
VITE_AUTHORITY=https://login.microsoftonline.com/common
VITE_TENANT_ID=TENANT-ID
VITE_API_URL=http://localhost:3001
```

E. Run and test

26. Install and start both servers:

```
npm install
npm run dev -w @observe/auth-api
npm run dev -w @observe/auth-web
```

27. Open `http://localhost:5174`.
28. Microsoft, work or school account: click **Continue with Microsoft** and sign in.
29. Gmail: type the Gmail address under "or use a Gmail address", click **Continue with Gmail**, and sign in with Google.
30. View users: Entra ID → Users → filter User type = Guest, and `GET /api/admin/users` on the API.
