Sign-in setup: Microsoft, Google and email code

After these steps people can sign in with a work, school or personal Microsoft account, a Gmail account, or a code sent to their email.

You will need

- Admin access to Microsoft Entra (entra.microsoft.com) and a Google account for Google Cloud (console.cloud.google.com).
- The address of your application's login page, from your development team.
- A public home page link and a privacy policy link for your application.

A. Microsoft Entra: register the application

1. Entra ID → App registrations → **New registration**.
2. Enter your application's name.
3. Supported account types: **Any organizational directory and personal Microsoft accounts**.
4. Redirect URI: choose platform **Web** and enter the login page address from your development team. Click **Register**.
5. On the Overview page, copy the **Application (client) ID** and the **Directory (tenant) ID**.
6. Certificates & secrets → **New client secret** → Add. Copy the secret **Value** now, because it is shown only once.
7. Send the three values from steps 5 and 6 to your development team through a secure channel.

B. Google Cloud: create the project

8. Project menu → **New Project** → name it, then **Create**.
9. APIs & Services → **OAuth consent screen** (Google Auth Platform) → **Get started**.
10. Enter the app name and your support email. Choose **External**. Add your contact email.
11. Open **Branding**. Enter the **Application home page** and **Privacy policy** links.
12. Under **Authorised domains** add `microsoftonline.com` and the domain of the links above. Click **Save**.
13. Open **Audience** → **Publish app**.
14. Open **Clients** → **Create client** → type **Web application**.

15. Under Authorised redirect URIs, add all three, using your own tenant ID and domain name:

```
https://login.microsoftonline.com
https://login.microsoftonline.com/te/TENANT-ID/oauth2/authresp
https://login.microsoftonline.com/te/YOURNAME.onmicrosoft.com/oauth2/authresp
```

16. Click **Create**. Copy the **Client ID** and **Client secret**.

C. Microsoft Entra: turn on Google and email code

17. Entra ID → External Identities → All identity providers → **Google** → Configure. Paste the Google Client ID and secret → **Save**.
18. Same list → **Email one-time passcode** → set it to **Enabled** → Save.
19. External Identities → External collaboration settings → **Enable guest self-service sign up via user flows** = Yes → Save.
20. External Identities → User flows → **New user flow**. Name it `signup`.
21. Under identity providers, tick **Google**, **Email one-time passcode** and **Azure Active Directory Sign up**.
22. Under user attributes, collect **Display Name**. Click **Create**.
23. Open the new flow → Applications → **Add application** → choose your application → Select.
